

The whole world of geoinformation

IMAGEprofile

Software solutions for all process in the office or in the field

HHK Datentechnik GmbH is one of the leading software and solution providers in the surveying and geoinformation area.

HHK's story of success began in 1984. The company's long experience, innovative solutions and close customer contact has resulted in a steadily increasing customer base.

Since 2008 HHK has been a subsidiary of Trimble, one of the leading global providers of surveying solutions.

As a strong partner, Trimble gives HHK excellent opportunities to benefit from synergies and a globally established infrastructure.

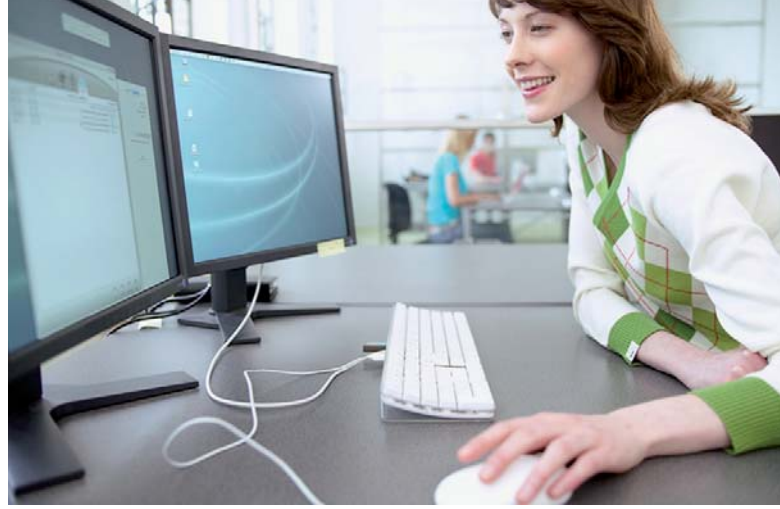

Our head office is located in Braunschweig, Germany. Here our main product development work and product support is carried out.

We particularly focus on good customer support and satisfaction. Our branches, sales centres and partner companies ensure that we can provide comprehensive service, such as, training and sales, throughout Germany.

We are always close by!

HHK software enables you to carry out surveying and GIS work using the latest technology. Our solutions allow you to achieve high efficiency in all your company's operational procedures.

Office-Management

GEObüro® is an integrated office management system for time and cost optimisation. Its features include complete documentation of operating results, hourly time recording, billing and calculations. Efficient interfaces to all common Office tools such as Outlook, Word or Excel allow data to be easily integrated.

The latest .NET technology and data storage in a SQL database give users maximum flexibility. GEObüro® is especially designed for use in surveying and engineering offices, land survey offices and land registries.

GIS

GEOgrafIS® provides structured data management, high quality data analysis and a range of solutions for local authorities, utilities and industrial companies. High quality CAD and special tools are available for processing data.

A large number of high quality interfaces ensure the system delivers a reliable data exchange with other CAD and GIS systems. The capabilities of GEOgrafIS® are completed by comprehensive reporting and printing functions.

WEB-solutions

HHKmapserver offers high grade capabilities for publishing and evaluating CAD and GIS data on the internet and intranet. It is designed for large quantities of data and can operate with a wide range of browsers and applications.

CAD for surveying, cadastre and GIS

GEOgraf® is a central tool for the production and use of geodata developed for engineering offices, publicly appointed surveyors, land registry and land tenure offices as well as local authorities, utilities, planning offices and building contractors. GEOgraf® gives the user complete support: in the field it serves as a graphic field book with sensor control when using a simple total station, a robotic system or RTK GNSS. In the office it offers a wide range of services: from data collection to visualization, site plans to extensive inventory documentation, or CAD projects to GIS data collection.

GEOgraf® can provide quality surveying benefits for land registry and engineering surveying work.

In cadastral work it supports all ALK and ALKIS® processes at surveying centres and can cater for all the requirements of a particular geographic area.

GEOgraf® is specially equipped for the efficient and accurate collection of a range of geodata. A large number of interfaces enable optimal data exchange with all common CAD and GIS systems.

GEOgraf® is an ideal CAD system for surveying and planning.

Complete Support

Try for yourself

HHK software products based on many years of experience. You can test the complete functionality of our software solutions before buying. Our hotline can give you support.

We are here for you

The hotline is available on workdays by phone, email and fax. If you would prefer we are happy to help you personally on site. Our product specialists will usually know within a very short time how to give a helpful response.

Always up to date

Users have access to our internet download area and update service. We also regularly offer trainings to help you incorporate our products more effectively.

Interested?

Arrange for one of our product specialists to prepare an individual solution for you.
